

## EDITORIAL

TELFOR is the abbreviation for the Telecommunications Forum, a long lasting scientific, engineering and professional event that started in 1993 in Belgrade, Serbia. This year, TELFOR is going to be organized for the 28<sup>th</sup> time, what is quite an impressive result for any annual scientific conference. Initial idea was to establish a national scientific conference in Telecommunications. Over years, that idea has evolved to a huge regional international conference in Telecommunications and Information Technologies, having also its several other parallel tracks, like special presentations of companies, presentations and papers of invited experts, exhibition of telecommunications hardware, software, systems and services, then seminars, tutorials, round tables, etc. Exceptionally, in this year of pandemic, the 28<sup>th</sup> TELFOR will be organized as an online conference.

During the TELFOR's existence several thousand scientific papers were presented and published, quite a number of them being of a considerable quality and with important results. Having such resources at disposal, establishing a scientific journal, the TELFOR Journal, was a very natural next step for several reasons:

- Authors with favorable TELFOR reviewers' assessments would have an additional opportunity to improve and expand their initial ideas;
- Editorial board would have a wide set of prospective invited authors;
- After some time of existence, TELFOR Journal attracts independent authors to submit their papers to be considered for publishing.

The history of TELFOR Journal is now twelve years long. The first volume consisting of two issues was published during the TELFOR 2009 conference in November 2009. That first volume of the Journal was intended to present a selection of the improved and expanded versions of the best scientific papers presented at Telecommunications Forum 2008. Up to now, 271 thoroughly reviewed scientific papers have been published, almost 24 papers per year on the average. Apart from authors from Serbia, authors from many other European and non-European countries were also present.

After twelve years one can easily conclude that TELFOR Journal is already a recognizable scientific publication in the region of South-East Europe. According to Serbian state and civil scientific authorities, TELFOR Journal got from 2014 a considerably better formal status. Starting with 2014 all published Journal papers got a DOI. The impressions of the scientific and research community were also very positive, both with respect to the Journal scientific quality and the very nice design.

The large spectrum of TELFOR Journal topics accounts for the rapid convergence through telecommunications towards the information and knowledge-based society. The Journal provides a medium for exchanging research results and technological achievements accomplished by the scientific community from academia and industry.

TELFOR Journal is indexed in several well recognized index bases: Directory of Open Access Journals (DOAJ), Google Scholar, SCOPUS (from 2016), National Library of Serbia Repository, Serbian Citation Index (Sci Index), ... TELFOR Journal has been submitted for evaluation in Clarivate Analytics ESCI list.

The TELFOR Journal is published in the English language, with both electronic and printed versions, minimally with two issues per year. The Telfor Journal originated from the IEEE sponsored conference and follows the IEEE tradition in terms of procedures and quality of papers. The TELFOR Journal is an OPEN ACCESS journal with no charge for authors and readers.

We have a pleasure to present the first issue of the twelfth volume of TELFOR Journal with 13 scientific papers. Five of them come from the TELFOR 2019 conference where initially presented in their preliminary forms. The remaining eight papers were selected from a number of papers submitted directly to the Journal for evaluation.

Editor-in-Chief  
Prof. dr Đorđe Paunović
